

## LETTER FROM THE EDITOR-IN-CHIEF

Dear Colleagues and Friends:

We are once again delighted to bring you another issue of JSDA (JOURNAL OF SUSTAINABLE DEVELOPMENT IN AFRICA). We have always focused on innovative ways of using and protecting Africa's resources and expanding the opportunities for creating sustainable environments for perpetuating Africa's resources for future generations. The summer issue concentrates on sustainable agriculture and the sustainability of programs, projects, and policies related to agricultural production.

The two articles in this issue are: 1) Comparative Profitability and Technical Efficiency of Small-Scale Rice Farmers With and Without Access to Improved Production Technology in North Central Nigeria and 2) Evaluation of Different Organic Sources of Nutrients on Growth, Yield, and Quality of Okra Varieties in Northern Guinea Savanna Zone in Nigeria.

These two articles are timely expanding the readers knowledge about the sustainability of agriculture in Nigeria. They are instructive and informative on matters of production and consumption. There is a strong scientific aspect of Okra growth and yield.

The JOURNAL OF SUSTAINABLE DEVELOPMENT IN AFRICA (JSDA) continues to publish the best scientific papers to enlighten its readers about matters of urgent concern across the continent of Africa.

Thank you for your continued support over the past twenty-four years.

Sincerely

Valentine Udoh James, CEI, CAQS  
Professor of Environmental Management, Planning and Policy  
Pennsylvania Western University, Clarion
